

Actual-target guidance prevents local insertion failures on six cable cases

Scripted development evidence – no retries started – no learned or recovery-effect claim

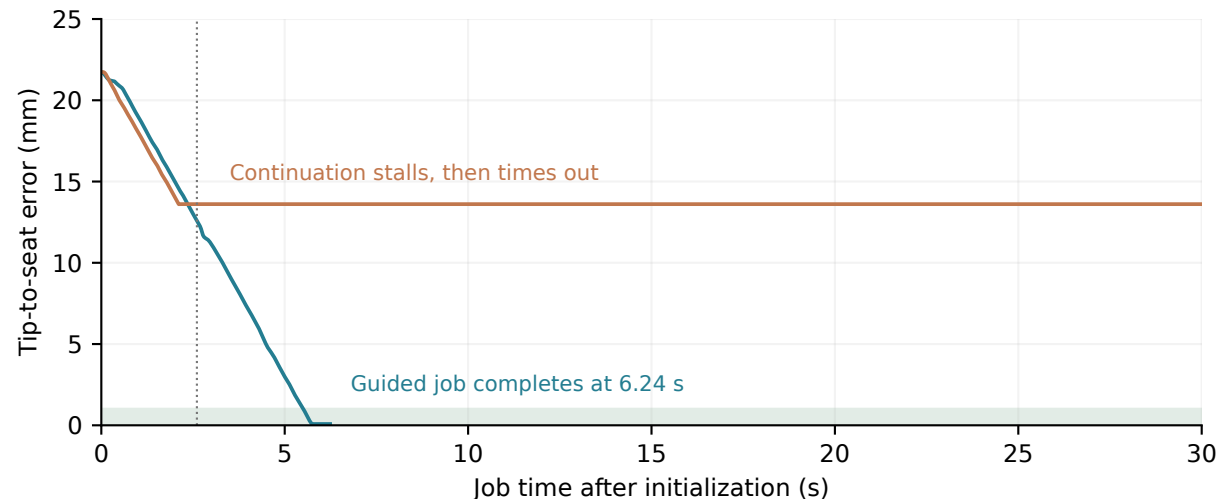

All six requests per controller

Representative 2 mm offset: first registered layout

Cable layout	Guided	Continue
0: nominal	seat	seat
0: 2 mm offset	seat	timeout
1: nominal	seat	seat
1: 2 mm offset	seat	timeout
2: nominal	seat	seat
2: 2 mm offset	seat	timeout

Three cable directions – nominal / 2 mm local offset; same task, force limits, 30 s deadline and paired initialization.
Free distal cable and fixed preset grasp; held seating is not released retention. Continued insertion is a weak comparator.
